

CABLE WINCH 3060

Cable winch 3060 is a capstan winch with double cam wheels. The winch is operated with motor unit 2042, all models with worm gear that has forward-reverse drive. With it's double capstan wheels, the machine always has access to maximum pulling force 1 000 kp. The drum can be declutched to be able to quickly pull out the line.

As standard, manometer and 4 pcs. fixturing bars to anchor the winch to the ground. Can also be fixed with the help of ex. a vehicle or tree. Winch 3060 is equipped as standard with a steel drum and Ø5 x 500m wire, but the drive unit is ordered separately.

Double capstan wheels

One of the many advantages of dual capstan wheels is that you always have access to maximum traction. Thanks to the design of the capstan wheels, the steel wire can be quickly disassembled / assembled when the cover is removed. Watch instructional video.

Product video Sahlins Sweden
